Glossary

1. Introduction

This document refers to all the terms used for describing the possibly unknown terms that appear in the documentation of the Criminal Investigation Tracker and might raise problems in understanding the use of the application.

2. Glossary

Term	Definition and Information	Format	Validation Rules
CSI	Crime Scene Investigation		
CSI unit	collect and examine evidence present at crime scenes. They typically walk the scene of a crime searching for useful evidence such as fingerprints, hairs, or fibers, for later analysis at a crime lab		
Forensic	relating to or denoting the application of scientific methods and techniques to the investigation of crime.		
JDBC	Java Database Connection is a program that enables various databases to be accessed by Java application servers that are run on the Java 2 Platform.		
DAO	Data Access Object is used to separate low level data accessing API or operations from high level business services.		
Table Module	Is implemented by coding a class that encapsulates all the interaction with a database table
